Module Versions

This version of the CTX-Email deployment plan is relevant up to version 1.0 of the CTX-Email module.

Preface

About this Manual

This document provides a guide on how to deploy the CTX-Email module in your Cortex system.

Audience

This document is intended for those who require the use of CTX-Email module to send emails in a pre-defined format with user defined content.

Abbreviations used in this Document

SMTP Simple Mail Transfer Protocol

1 Requirements

This document details all the steps required to deploy the CTX-Email module.

Requirements:

- Remote Desktop Access to the Cortex Server
- Cortex v6.4 installed on the Cortex Server
- Connectivity from the Cortex Application Server to a SMTP Server

2 Import CTX-Email

To deploy the CTX-Email module on your Cortex system, the CTX-Email Studio Package needs to be imported on your Cortex system. To do this:

- Download the CTX-Email Studio Package
- Import the Studio Package in Cortex Gateway
- Ensure the relevant users have the required permissions in 'Studio Authorisation'

After this, all users in the authorised groups will be able to view and execute the subtask.
